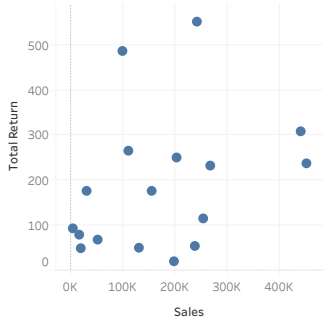
Superstore Returns Analysis – Storytelling with Data

What Is Driving Product Returns at Superstore?	Higher Sales Do Not Always Mean Higher Returns	Technology Products Have the Highest Return Rates	A small group of repeat customers accounts for a disproportionately high share of total returns.	Return rates vary by state, suggesting regional differences in customer behavior or logistics-related factors..	Return rates fluctuate over time, with seasonal spikes	High return volume is driven by specific sub-categories within Office Supplies.	Sales and Return Trends Vary by Category Over Time	.

Product returns represent a significant cost and operational challenge for retailers, impacting revenue, inventory management, and customer satisfaction.
This analysis explores return behavior at Superstore to identify the key factors driving product returns. Using order-level data, returns were analyzed across product categories, customers, geographic regions, and time.
Key measures used in this analysis include total sales, number of returns, and return rate (calculated as the proportion of returned orders). Understanding where and why returns o..

Superstore Returns Analysis – Storytelling with Data

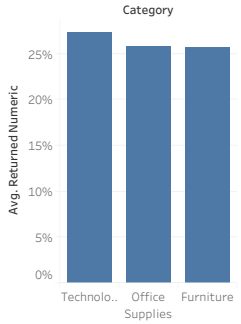
What Is Driving Product Returns at Superstore?	Higher Sales Do Not Always Mean Higher Returns	Technology Products Have the Highest Return Rates	A small group of repeat customers accounts for a disproportionately high share of total returns.	Return rates vary by state, suggesting regional differences in customer behavior or logistics-related factors..	Return rates fluctuate over time, with seasonal spikes	High return volume is driven by specific sub-categories within Office Supplies.	Sales and Return Trends Vary by Category Over Time



This scatterplot shows the relationship between total sales and the number of returns by product sub-category. While some high-sales sub-categories also experience a higher number of returns, the relationship is not consistent across all products. Several sub-categories generate significant sales with relatively low return volumes, suggesting that high sales alone do not necessarily drive higher returns.

Superstore Returns Analysis – Storytelling with Data

What Is Driving Product Returns at Superstore?	Higher Sales Do Not Always Mean Higher Returns	Technology Products Have the Highest Return Rates	A small group of repeat customers accounts for a disproportionately high share of total returns.	Return rates vary by state, suggesting regional differences in customer behavior or logistics-related factors..	Return rates fluctuate over time, with seasonal spikes	High return volume is driven by specific sub-categories within Office Supplies.	Sales and Return Trends Vary by Category Over Time



This chart compares return rates across product categories. Technology products exhibit the highest return rate, followed by Office Supplies and Furniture. This suggests that product characteristics, such as complexity or customer expectations, may play a significant role in driving returns, particularly within the Technology catego..

Return rates fluctuate over time, with seasonal spikes	High return volume is driven by specific sub-categories within Office Supplies.	Sales and Return Trends Vary by Category Over Time	Office Supplies Drive the Largest Share of Total Returns.	Interactive Dashboard for Monitoring Product Returns	Conclusion & Key Insights

This analysis reveals that product returns at Superstore are driven by a combination of product characteristics, customer behavior, geography, and timing. Technology products exhibit the highest return rates, while Office Supplies contribute the largest share of total return volume due to specific high-return sub-categories. A small group of repeat customers accounts for a disproportionate number of returns, and return rates vary across regions and over time. Together, these insights highlight opportunities for targeted product-level interventions, customer policy reviews, and operational improvements to reduce return volume and improve profitability.
